Given $m_1 = 25kg \rightarrow u_1 = 40 m/s$
$m_2 = 15kg \rightarrow u_2 = 0$
After collision both are moving with same velocity
$v_1 = v_2 = v_{com}$
According to law of conservation of linear momentum
$m_1 u_1 + m_2 u_2 = m_1 v_1 + m_2 v_2$
$\Rightarrow 25 \times 40 + 15(0) = 25 \times v_{com} + 15 v_{com}$

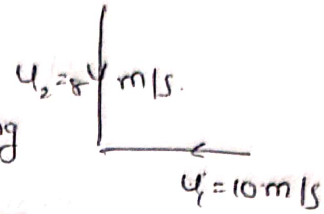
Given

$m_1 = 3\,kg$; $m_2 = 5\,kg$

$u_1 = 10\,m/s$; $u_2 = 8\,m/s$.



After collision both are moving with same velocity $V_1 = V_2 = V_{com}$.

According to law of conservation of linear momentum

Momentum Before collision = momentum After collision $\rightarrow$ (1)

Momentum Before collision $= \sqrt{P_1^2 + P_2^2} = \sqrt{(m_1 u_1)^2 + (m_2 u_2)^2}$

$= \sqrt{(3 \times 10)^2 + (5 \times 8)^2} = \sqrt{(30)^2 + (40)^2}$

$\Rightarrow 50\ kgm/s$

From (1)

$50 = m_1 V_1 + m_2 V_2$

$\Rightarrow 50 = 3V_{com} + 5V_{com}$

$\Rightarrow 50 = 8V_{com} \Rightarrow V_{com} = \frac{50}{8} = 6.25\,m/s$

(4)

Given $u_1 = 40\,m/s$; $u_2 = 0$

Acc to law of conservation of linear momentum

$m_1 u_1 + m_2 u_2 = m_1 V_1 + m_2 V_2$

$\Rightarrow m_1 \times 40 + m_2 (0) = m_1 \times 30 + m_2 \times 30$. $\Rightarrow \boxed{\frac{m_1}{m_2} = \frac{30}{10} = \frac{3}{1}}$

$V_1 = V_2 = V_{com}$.

Momentum Before collision $= m_1 u_1 + m_2 u_2$

$\Rightarrow 5(2\hat{i}) + 10(\sqrt{3})\hat{j}$

$\Rightarrow 10\hat{i} + 10\sqrt{3}\hat{j}$

$|P_{Before}| = \sqrt{10^2 + (10\sqrt{3})^2} = 10\sqrt{1+3} = 20$ kgm/s

According to law of conservation of linear momentum

$\Rightarrow m_1 V_1 + m_2 V_2 = m_1 u_1 + m_2 u_2$

$\Rightarrow 5V_{com} + 10V_{com} = 20$

$\Rightarrow 15V_{com} = 20 \Rightarrow V_{com} = \frac{20}{15} = \frac{4}{3}$ m/s $\rightarrow$ C.

After collision both bodies are moving with same velocity

$V_1 = V_2 = V_{com}$.

According to law of conservation of linear momentum

$m_1 u_1 + m_2 u_2 = m_1 V_1 + m_2 V_2$

$\Rightarrow 2(\hat{i} + 2\hat{j} - 3\hat{k}) + 3(2\hat{i} + \hat{j} + \hat{k}) = 2V_{com} + 3V_{com}$

$\Rightarrow 2\hat{i} + 4\hat{j} - 6\hat{k} + 6\hat{i} + 3\hat{j} + 3\hat{k} = 5V_{com}$

$\Rightarrow 8\hat{i} + 7\hat{j} - 3\hat{k} = 5V_{com}$

$\Rightarrow V_{com} = \frac{1}{5}[8\hat{i} + 7\hat{j} - 3\hat{k}] \rightarrow$ A.

we know velocities of two bodies after collision

$$v_1 = \frac{(m_1 - m_2)u_1 + 2m_2u_2}{m_1 + m_2}$$

$$v_2 = \frac{2m_1u_1 + (m_2 - m_1)u_2}{m_1 + m_2}$$

Given $m_2 >> m_1$; $u_1 = 0$.

$\therefore$ $v_1 = \frac{2m_2u_2}{m_2} = 2u_2$ m_1 can be neglected

$v_2 = \frac{+m_2u_2}{m_2} = +u_2$

so lighter body moves with twice the velocity of havier body and havier body moves with same velocity in same direction.

6

If $m_1 >> m_2$.

m_1 is havier body $\therefore$ $u_1 = 0$.

we know $v_1 = \frac{(m_1 - m_2)u_1 + 2m_2u_2}{m_1 + m_2}$ m_2 can be neglected

$v_1 = \frac{(m_1)0 + }{m_1} \simeq 0$.

$v_2 = \frac{2mu_1 + (m_2 - m_1)u_2}{m_1 + m_2} = 0 + \frac{(-m_1)u_2}{m_1} = -u_2$

lighter body retraces its both, havier body does not move.

(7)

(2)

Given $m_1 = m_2$ and $u_1 = -u_2$

After collision $v_1 = \frac{(m_1 - m_2)u_1 + 2m_2 u_2}{m_1 + m_2}$

$\Rightarrow v_1 = \frac{0 u_1 + 2m_1 u_2}{2m_1}$

$v_1 = u_2 = u_1$

$v_2 = \frac{(m_2 - m_1)u_2 + 2m_1 u_1}{m_1 + m_2} = \frac{0 \times u_2 + 2m_1 u_1}{2m_1}$

$\therefore \boxed{v_2 = u_1} = u_1$
